

A shell, cyclic locus, and the exact torsor

B three quotient layers

C what each layer retains

layer	cyclic classes	Δ /norm label	noncyclic strata
full C_q	1	erased	separate in E_q
symplectic C_q^1	$ \text{im } N_q $	retained	separate
reversor extension	pairs $d, -d$	paired	not mixed with CV

Burnside / orbifold / stacky refinements:
outside scope, not rejected

Both coarse quotient clocks are erased because $A \in C_q^1 \subset C_q$.
